

VLAN Trunking Protocol

Your junior network engineer asks you what a VLAN Trunking Protocol does. You being a senior network engineer, what would you answer?

Selecione uma alternativa

- A** VLAN Trunking Protocol (VTP) is a protocol used to replicate VLANs in Server Switches inside the same domain
- B** VLAN Trunking Protocol (VTP) is a protocol used to replicate VLANs through Client Switches inside the same domain.
- C** VLAN Trunking Protocol (VTP) is a protocol used to replicate VLANs in Transparent Switches inside the same domain
- D** VLAN Trunking Protocol (VTP) is a protocol used to replicate VLANs in Client Switches even if they are in different domains
