

Duplex mismatch

You're configuring a Cisco equipment when you see a log message saying **Duplex mismatch**. What is the most likely reason why this message is showing?

Selecione uma alternativa

- A** The most likely reason would be to have the local port configured in Half Duplex and the remote port configured in Full Duplex, one port transmits or receives and the other transmits and receives at the same time and this could be a problem
- B** The most likely reason would be to have the local and remote ports, both configured in Semi Duplex, this mode transmits and receives with a slight delay and this could be a problem
- C** The most likely reason would be to have the local and remote ports, both configured in Half Duplex, this mode only transmits or receives and this could be a problem
- D** The most likely reason would be to have the local and remote ports, both configured in Full Duplex, this mode transmits and receives at the same time and this could be a problem
