

Preload

Faça o **preload** das fontes necessárias para os títulos da home. Use a sintaxe do `rel=preload` para as versões `regular`, `extrabold` e `light` da OpenSans:

```
<link rel="preload" href="assets/font/opensans/opensans-regular.woff2" as="font" type="font/wof-  
<link rel="preload" href="assets/font/opensans/opensans-extrabold.woff2" as="font" type="font/w  
<link rel="preload" href="assets/font/opensans/opensans-light.woff2" as="font" type="font/woff2'
```
