Troubleshooting the Switch - Part I

You're a network engineer and your task is to troubleshoot a Switch which has a problem on interface Fast Ethernet 0/1. You type the command **show interfaces FastEthernet 0/1** and you see the follwing result **FastEthernet0/1 is down, line protocol is down.** What is the most likely reason for the problem?

Selecione uma alternativa

A	The most likely reason would be misconfigured TCP windows on the local and the remote device

B	The most likely reason would be misconfigured MAC addresses on the local and remote device

C	The most likely reason would be a problem on the interface itself or the cable used to connect the Switch and the remote device

D	The most likely reason would be misconfigured IP addresses on the local and remote device
