

Broadcast communication

Your junior network engineer says that when a Switch receives a broadcast message that it'll be sent to all its ports. Do you agree with this statement?

Selecione uma alternativa

- A** No! Broadcast communication happens when one device sends a message to a group of devices. It means that when a Switch receives this broadcast message, it'll only send to some ports
- B** No! Broadcast communication happens when one device sends a message to all devices, however when the Switch receives a broadcast message it'll not send it back to the port that sent the packet
- C** Yes! Broadcast communication happens when one devices sends a message to all devices. It means that when a Switch receives this broadcast message, it'll send to all its ports
- D** No! Broadcast communication involves only devices that are communicating in a network. It means that when a Switch receives this broadcast message, it'll send to just the port destined to
