

RESOURCES

Bluehost

You will need to get a domain and hosting with WordPress installed to create your landing page. Bluehost has cheap shared hosting that does auto-installs of WordPress to make the process super-easy for you. [Sign up with Bluehost here.](#)

Thrive Architect

You'll use Thrive Architect to build your landing pages block by block. You'll also be able to import my landing page to give you a "done-for-you" lander if you use Thrive Architect. You can of course build a landing page without Thrive Architect, but it does make things super-easy. [Get Thrive Architect here.](#)

Clickmagick

Clickmagick is an essential tool so you can track every aspect of your campaign. You can see which keywords convert to a sale and which ones don't so you can optimize your campaign to make the most profit. [Get Clickmagick here.](#)

Code for the header of your landing page

You'll need to add some code to the header of your landing page so Clickmagick can do tracking for you. Assuming you're using Clickmagick "Links" as in the How-to video, here is the code you need to add to your header:

```
<script src='//cdn.clickmagick.com/misc/js/cmtools.js'></script>
```

Earnings disclaimer: Results shown in this course are not typical. The results you can achieve come down to hard work and ability to test, fail, re-test, and keep working at it. I make no guarantees about the income you can achieve, if any.
