

Questão #39

PROGRESSO:

39/60

An EC2 instance hosts a Javascript-based application that accesses a DynamoDB table. This EC2 instance is accessed by multiple users on the development team. Which of the following is a safe way to ensure that the EC2 instance accesses the DynamoDB table?

Selecione uma alternativa

- A** Use IAM Access Groups with the right permissions to interact with DynamoDB and assign it to the EC2 Instance
- B** Use KMS keys with the right permissions to interact with DynamoDB and assign it to the EC2 Instance
- C** Use IAM Roles with permissions to interact with DynamoDB and assign it to the EC2 Instance
- D** Use IAM Access Keys with the right permissions to interact with DynamoDB and assign it to the EC2 Instance
