

Questão #42

PROGRESSO:

42/60

You have a single local 3 TB volume that is used to maintain a large image repository. This repository is growing at 500 GB per year and should be presented as a single logical volume. The IT team decided to migrate the local storage to the cloud but it needs a low latency for the data accessed frequently. Which AWS Storage Gateway configuration should be used?

Selecione uma alternativa

- A** Gateway-Stored volumes with snapshots scheduled to Amazon S3
- B** Gateway-Virtual Tape Library with snapshots to Amazon Glacier
- C** Gateway-Cached volumes with snapshots scheduled to Amazon S3
- D** Gateway-Virtual Tape Library with snapshots to Amazon S3
