

**Telnet x SSH**

At work there is a junior network engineer trying to remotely access a device using Telnet, however you tell him this is not the best protocol to use for remote access. Why would you say that?

*Selecione uma alternativa*

**A** Telnet consumes a lot of memory and it should be avoided at all costs

**B** Telnet is not as fast as some other protocols such as SSH

**C** Telnet has limited features compared to other protocols

**D** Telnet is not as secure as SSH
