

Usando JDBC Authentication

Transcrição

Segue o script SQL para criação das tabelas `users` e `authorities` :

```
create table users(  
    username varchar(50) not null primary key,  
    password varchar(200) not null,  
    enabled boolean not null  
);  
  
create table authorities (  
    username varchar(50) not null,  
    authority varchar(50) not null,  
    constraint fk_authorities_users foreign key(username) references users(username)  
);  
create unique index ix_auth_username on authorities (username,authority);
```
