

Aplicação parcial de uma função

Temos a seguinte função

```
const changeTextFromElement = (element, text) =>
  element.textContent = text;

const message = document.querySelector('#message');
changeTextFromElement(message, 'Welcome');
changeTextFromElement(message, 'Se ya');
```

Marque a opção que realiza a *partial application* do primeiro parâmetro da função:

Selecione uma alternativa

A

```
const changeTextFromElement = (element, text) =>
  element.textContent = text;

const message = document.querySelector('#message');
const changeText = changeTextFromElement.bind(null, message);

changeText('Welcome');
changeText('See ya!');
```

B

```
const changeTextFromElement = (element, text) =>
  element.textContent = text;

const message = document.querySelector('#message');
const changeText = changeText.bind(null, message);

changeText('Welcome');
changeText('See ya!');
```

C

```
const changeTextFromElement = (element, text) =>
  element.textContent = text;

const message = document.querySelector('#message');
const changeText = changeTextFromElement.bind(message, null);

changeText('Welcome');
changeText('See ya!');
```
