

DMZ region

You have a meeting with a president of a company and you need to explain what a DMZ is. How would you explain that?

Selecione uma alternativa

- A** The DMZ is a specific region in our company where we put all our servers which will only be used internally.
- B** The DMZ is a specific region in our network where we placed devices that can only be accessed externally
- C** The DMZ is the region in our network where we place resources that need to be accessed by external users.
- D** The DMZ is the region in our network where we allow intruders to access and do all their attacks. This region doesn't have anything important and is only used to see how intruders can get access of a network and with this knowledge gained, we'll be able to protect our network in a future attack
