Troubleshooting OSI model

A network administrator is connecting two Switches, however the lights on the Switch ports are not turning green. You know the Switches are working properly, so what's the most likely reason for the lights not turning green?

Selecione uma alternativa

A Since the ports are not turning green, the most likely reason is a layer 4 problem and we should check if TCP windowing is properly set

B Since the ports are not turning green, the most likely reason is a layer 1 problem and we should check if the cables are correct

C Since the ports are not turning green , the most likely reason is a layer 3 problem and we should check if the appropriate IP are set

D Since the ports are not turning green, the most likely reason is a layer 2 problem and we should send the Switches to repair
