

Questão #8

PROGRESSO:

8/60

In your company, a key component in the disaster recovery plan (DR) will be the database instances and their data. Recovery Time Objective (RTO) allows read replicas to be used to offload read traffic from the master database. What items are the main features of reading replicas?

Selecione 3 alternativas

A You can have up to five read replicas per master, each with its own DNS endpoint.

B When a problem is detected in the primary instance, it will automatically failover to the read replica.

C Synchronous replication

D Read replica can be manually promoted as a standalone database instance.

E You can create read replicas within AZ, cross-AZ, or cross-Region.
