## Posição do resistor

No capítulo, o instrutor adiciona um resistor para a perna negativa do LED:

No entanto se colocarmos o resistor para a perna positiva teremos o mesmo resultado:

Por quê?

### Responda

INSERIR CÓDIGO	FORMATAÇÃO
<pre>int ledPin = 13; // Pin 13 is the LED pin  void setup() {   // Set the digital pin mode to output   pinMode(ledPin, OUTPUT); }  void loop() {   // Turn the LED on (HIGH is the voltage applied to the LED)   digitalWrite(ledPin, HIGH);   // Wait for a second   delay(1000);   // Turn the LED off (LOW is the voltage not applied to the LED)   digitalWrite(ledPin, LOW);   // Wait for a second   delay(1000); }</pre>	1/1
