Baixando uma fonte do Google

No último vídeo foram inseridos os textos no layout produzido. Para inserir o texto foi necessário escolher uma tipografia para o projeto. A tipografia escolhida foi a Lato, do Google Fonts. Para baixar uma fonte do Google é bem simples, basta acessar o site [fonts.google \(https://fonts.google.com/\)](https://fonts.google.com/).

The screenshot shows the Google Fonts website interface. On the left, there's a search bar and a sidebar with filters for 'Categories' (Serif, Sans Serif, Display, Handwriting, Monospace), 'Sorting' (Trending), 'Languages' (All Languages), and 'Number of styles', 'Thickness', 'Slant', 'Width' sliders. The main content area displays a grid of font families with their names, creators, and specimen text. The 'Lato' font family is highlighted, showing its specimen text: 'A shining crescent far beneath the flying vessel.' The 'Open Sans' font family is also visible with its specimen text: 'Almost before we knew it, we had left the ground.' At the bottom, there's a 'SEE SPECIMEN' button and a note about activating Windows.

Após escolher a fonte, através da pesquisa com o filtro à direita da tela, é necessário instalar. Para isso basta clicar no ícone de “+” no topo de cada família tipográfica. Isso irá subir um elemento no canto direito inferior da tela.

This screenshot shows the same Google Fonts interface as the previous one, but with a key difference: the 'Open Sans' font family is now selected. A small '1 Family Selected' message is displayed at the top of the Open Sans row. The Open Sans specimen text is now highlighted in red. The rest of the interface remains the same, with the sidebar filters and the other font families visible.

Clique na barra preta no canto inferior da tela que irá subir as opções de download da tipografia.

The screenshot shows the Google Fonts website with the 'Open Sans' font selected. A modal window titled 'Family Selected' is open, showing the selected font and download options. The modal includes tabs for 'EMBED' and 'CUSTOMIZE', and sections for 'STANDARD @IMPORT' and 'Specify in CSS' with corresponding code snippets. The background shows various font families and their sample text.

Pronto, agora é só clicar no botão de download e instalar a fonte na sua máquina.
