

## Sticky configuration

You're a Cisco engineer who needs to secure the interfaces of your Switch. While you're making the configuration, you see the command **sticky**. What does this command actually do?

*Selecione uma alternativa*

- A** Sticky means that the user needs to manually enter the MAC address of the device connected to a port
- B** Sticky means that the port can dynamically associate the MAC address of the device connected to it
- C** Sticky means that the port can change its mode of operation from Half Duplex to Full Duplex in a dynamic way
- D** Sticky means that the Switch will show a history of all the MAC addresses that passed through an interface
